

# Upholstery smoothing instruction

Based on the example of the Artiko sofa

1. Press the fabric with the palms of your hands at the creases and spread the excess to the sides.

2. Spread the creases that have formed on the sides into the back of the seat with the palms of your hands.

3. To eliminate the excess fabric gathered while spreading the creases, slide it between the seat and the backrest.

4. Move the creases formed at the curve of the seat backwards with your hands. If necessary slide the excess down the seat (towards the back).

5. Spread the wrinkled material created during assembly into the upper part of the backrest.

6. Spread the excess material over the edges of the backrest.
